

Package ‘CloneFinder’

August 4, 2017

Version 0.7.1

Date 2016-08-04

Title Finding Subclones in SNP and Sequencing Data

Author Kevin R. Coombes, Mark Zucker

Maintainer Kevin R. Coombes <krc@silicovore.com>

Description The CloneFinder package defines the classes used to identify outliers (threshing) and compute the number of significant principal components and number of clusters (reaping) in a joint application of PCA and hierarchical clustering.

Depends R (>= 3.0)

Imports methods, graphics, mc2d, combinat
